

University of Pittsburgh Center for Medical Innovation (CMI)

A University Center in the Swanson School of Engineering

The Center for Medical Innovation at the Swanson School of Engineering is a collaboration among the University of Pittsburgh's Clinical and Translational Science Institute (CTSI), the Innovation Institute, and the Coulter Translational Research Partnership II (CTRP). Established in 2011, CMI promotes the application and development of innovative biomedical technologies to clinical problems; educates the next generation of innovators in cooperation with the schools of Engineering, Health Sciences, Business, and Law; and facilitates the translation of innovative biomedical technologies into marketable products and services. CMI has supported 76 early-stage projects through more than \$1.2 million in funding since inception.

CMI VISION

The vision of the CMI is to establish an internationally recognized center for developing innovative medical technologies, educating students, and facilitating commercialization.

CMI MISSION

The mission of CMI has three essential components:

- **Research:** To provide an organizational structure to link engineering faculty, clinicians, and students at the University of Pittsburgh, and to fund early-stage development of innovative biomedical technologies.
- **Education:** To educate the next generation of innovators in the design, development, and commercialization of medical technologies through classroom and hands-on experiences in cooperation with the schools of Engineering, Health Sciences, Business, and Law.
- **Development:** To facilitate the translation of innovative biomedical technologies into marketable products, services, and business ventures in collaboration with the University of Pittsburgh Innovation Institute, Clinical Translational Science Institute (CTSI), and the Coulter Translational Research Partnership.

Structure

The CMI promotes collaborations among University of Pittsburgh clinicians and engineers which are likely to result in improvements to healthcare. A multi-disciplinary CMI leadership team is in place to manage the process. Seed money will be available to clinician-engineer teams whose collaborative project proposals are successfully reviewed and approved by CMI.

Educational Program

CMI will offer, through the Swanson School's Department of Bioengineering, two options for a Professional Masters degree, and a new graduate Certificate in Medical Product Innovation. Additionally, engineering graduate students may participate in courses and innovation projects as part of their dissertation work. Medical students will be able to satisfy School of Medicine research requirements through participation in CMI sponsored projects. Courses in innovation and entrepreneurship already offered through the Swanson School of Engineering, the Katz School of Business, and the School of Law will be available to all students interested in medical innovation. Multi-disciplinary student teams (including graduate students in engineering and business, as well as law and medicine) will work with engineering faculty, clinicians, and industry advisors to develop innovative medical technologies through the prototype stage.

Directors

ALAN D. HIRSCHMAN, PhD

Executive Director, CMI

Professor of Bioengineering
Swanson School of Engineering, University of Pittsburgh

MARK ADKINS, MS/MBA

Associate Director, Medical Product Research and Development, CMI

Adjunct Faculty Lecturer
Swanson School of Engineering, University of Pittsburgh

BRYAN BROWN, PHD

Associate Director, CMI

Associate Professor of Bioengineering
McGowan Institute for Regenerative Medicine
University of Pittsburgh

KILICHAN GURLEYIK, DSC

Associate Director, Educational Programs, CMI

Assistant Professor of Bioengineering
Swanson School of Engineering, University of Pittsburgh

JOHN S. MAIER, MD, PhD

Associate Director, Clinical Affairs, CMI

Director of Research and Development
Department of Family Medicine, UPMC

JANICE L. PANZA, PhD

Associate Director, Business Development, CMI

Technology Licensing Manager
University of Pittsburgh Innovation Institute

PAUL J. PETROVICH, CPA

Associate Director, Technology Protection and Assessment, CMI

Assistant Professor, Technology Commercialization
University of Pittsburgh Innovation Institute

TATUM V. TARIN, MD

Associate Director, Clinical Affairs, CMI

Assistant Professor, Urology
School of Medicine, University of Pittsburgh

JONATHAN P. VANDE GEEST, PhD

Associate Director, CMI

Soft Tissue Biomechanics Laboratory (STBL)
Professor, Department of Bioengineering
Swanson School of Engineering, University of Pittsburgh

DAVID A. VORP, PhD

Associate Dean for Research, Swanson School of Engineering

William Kepler Whiteford Professor
Professor of Bioengineering, Cardiothoracic Surgery, and Surgery
Swanson School of Engineering, University of Pittsburgh

Representatives

SUSAN K. COHEN, PhD

School of Business Representative, CMI

Associate Professor of Business Administration
Joseph M. Katz Graduate School of Business and
College of Business Administration, University of Pittsburgh

University of
Pittsburgh

Center for Medical Innovation

2020 ROUND-1 PILOT FUNDING | AWARDS ANNOUNCEMENT

The University of Pittsburgh's Center for Medical Innovation (CMI) awarded grants totaling \$60,000 to three research groups through its 2020 Round-2 Pilot Funding Program for Early Stage Medical Technology Research and Development. The latest funding proposals include a new antiviral coating for PPE, a virus containment chamber for patients being intubated, and a device that can capture hemoglobin released into the blood plasma.

CMI, a University Center housed in Pitt's Swanson School of Engineering, supports applied technology projects in the early stages of development with "kickstart" funding toward the goal of transitioning the research to clinical adoption. Proposals are evaluated on the basis of scientific merit, technical and clinical relevance, potential health care impact and significance, experience of the investigators, and potential in obtaining further financial investment to translate the particular solution to healthcare.

"This is our ninth year of pilot funding," said Alan D. Hirschman, PhD, CMI Executive Director. "Since our inception, more than \$1.4 million from external funding sources and from the Swanson School of Engineering has been invested in early stage medical technologies. Many of these technologies have the potential to significantly improve the delivery of health care and several new companies have resulted from the program, which has successfully partnered UPMC's clinicians and surgeons with the Swanson School's engineering faculty."

2020 ROUND-1 CMI PILOT FUNDING AWARDEES

AWARD 1

Paul Leu, PhD

Associate Professor, Industrial Engineering, Swanson School of Engineering

Robert Shanks, PhD

Associate Professor, Department of Ophthalmology, UPMC

Eric Romanowski, MS

Research Instructor, Ophthalmology, University of Pittsburgh School of Medicine

FOR: Wash-Stable and Durable Anti-Virofouling Coatings for Reusable Medical Textiles

Development of an anti-viral coating for reusable PPE.

AWARD 2

David Turer, MD, MS

Resident, Plastic Surgery, UPMC

Heng Ban, PhD

Richard K. Mellon Professor, Mechanical and Materials Science, Swanson School of Engineering

J. Peter Rubin, MD, FACS

Chair, Department of Plastic Surgery, UPMC

FOR: Individual Biocontainment Unit for Reducing Viral Transmission to Healthcare Workers and Patients

Development of a virus-removing chamber for intubated patients.

AWARD 3

Nahmah Kim-Campbell, MD, MS

Assistant Professor, Critical Care Medicine and Pediatrics, UPMC

Ryan Orizondo, PhD

Assistant Professor, Bioengineering, Swanson School of Engineering

William Federspiel, PhD

John A. Swanson Professor of Bioengineering, Swanson School of Engineering

FOR: Targeted Removal of Cell-Free Plasma Hemoglobin in Extracorporeal Therapies

Development of a device capable of filtering plasma hemoglobin released during hemolysis.

PREVIOUSLY AWARDED PILOT FUNDING

2019 PILOT FUNDING AWARDS

Round 2

AWARD 1 – A Structurally and Mechanically Tunable Biocarpot for Peripheral Arterial Disease

AWARD 2 – Ex-Vivo Heart Perfusion System for Human Heart Support, Resuscitation, and Physiologic Testing

AWARD 3 – In-Vivo Efficacy of an Antibacterial and Biocompatible Polymeric Nanofilm on Titanium Implants

Round 1

AWARD 1 – Health-E-Nose: A Universal Portable Gas Sensor for Broad-Spectrum Detection of Volatile Organic Compounds Related to Health

AWARD 2 – Et3: An Endotracheal Tube that Prevents and Monitors Migration

AWARD 3 – FingerSight: Computer Vision and Haptic Technology to Assist the Visually Impaired
